SUMMARY

Backend engineer with two years building and operating REST services in Node.js and Python. Experience with PostgreSQL, Redis, containerised deployments and CI pipelines. Comfortable owning a service end to end, from schema design through on-call.

EXPERIENCE

Backend Developer, Nodeworks 2024 - present

- Built and maintained REST services in Node.js and Express serving internal reporting tools used by about forty staff.
- Migrated a nightly batch job from cron to a queue worker, cutting the reporting window from roughly four hours to forty minutes.
- Added integration tests and a GitHub Actions pipeline to a service that previously shipped without automated checks.

Software Engineering Intern, Cloudbase 2023

- Wrote internal tooling in Python to reconcile billing exports against the production database.
- Documented the on-call runbook for two services.

PROJECTS

Invoice reconciliation service

- FastAPI service matching supplier invoices to purchase orders, with a PostgreSQL schema and a small React dashboard.

Log triage tool

- Command-line tool grouping similar error traces so repeated failures collapse into one entry.

SKILLS

Languages	JavaScript, Python, SQL
Backend	Node.js, Express, FastAPI, REST APIs
Data	PostgreSQL, Redis, MongoDB
Infrastructure	Docker, GitHub Actions, Linux, AWS EC2

EDUCATION

B.E. Computer Science 2019 - 2023

Visvesvaraya Technological University
